

Where our electricity comes from

Like all energy companies, we are required to give our customers information on where we source our electricity. This information is provided in accordance with Electricity Supply License Condition 21, which has been implemented by the Electricity (Fuel Mix Disclosure) Regulations 2005 to give effect to article 3(6) of the EU Electricity Directive (2003/54/EC).

Breeze Energy Disclosure Label (Total energy supplied in the period April 17- March 18)		
Electricity supplied has been sourced from the following fuels:	% of total	
	Electricity supplied by Breeze Energy	UK Average
Coal	11.8%	7.64%
Natural Gas	62.6%	41.24%
Nuclear	19%	20.01%
Renewable	2.6%	29.04%
Other Sources	4%	2.07%
Total	100%	100%
Environmental Impact		
CO ² emissions	359g per kWh	231.7g per kWh
High-level radioactive waste	0.00133g/ kWh	0.00140g/kWh
For more information on the environmental impact of your energy supply visit www.breezeenergy.co.uk or call 0191 348 1212		

Carbon Dioxide Emissions - The weighted average of carbon dioxide emitted in the production of electricity from each fuel source.

High-level radioactive waste - Radioactive materials produced as a byproduct of the reactions that occur inside nuclear reactors (e.g. spent fuel or waste products)

Other - Energy generated from a source other than coal, natural gas, nuclear or renewable generation. For example, non-biodegradable waste, oil, coke oven gas, blast furnace gas, or other waste products from chemical processes.
